

Product codes/barcodes

Documentation requirements for commodities

The documentation should make it possible to verify that the correct product code/barcode has been registered and that it has been registered to the correct product.

Product code Consumer Unit

Mock-up/artwork/picture of the package should at least include:

- Product name
- Package size
- The product code/barcode

Alternatively, we approve a master data list that contains:

- Vnr (if this is assigned)
- Product name
- Package size
- The product code/barcode

Mock-up/artwork/picture is attached along with the master data list.

See also the [Industry standard for product codes](#).
